

→Market **Re-Opens March 18th**

→Sign up for **Pruning Seminar**

MARCH 05th E-NEWS

SPRING IS IN THE AIR!

The crocuses are blooming~ spring is on coming soon! And that means our market will be opening soon, too. We will re-open on **Monday, March 18th** and be open Monday through Saturday, 9 am to 5 pm. We'll start extending our hours at the beginning of April.

I can hardly wait to show you all the new things coming our way: new seeds, new plants, new giftware and even some new changes in the store that I think you'll love!

One of the changes we're making this year is in the types of workshops we have on offer. For over 20 years I've been teaching gardening classes; it's high time we changed things up a bit. Instead of the usual classroom-setting sessions, we're going to hold **hands-on workshops** through the growing season. And I'm getting the rest of the staff involved so it should be a lot of fun~ more on that in the weeks to come.

But due to popular demand, there's one seminar-type class we will do this year:

HOW TO PRUNE EVERYTHING!

Pruning isn't nearly so intimidating if you know why/how plants grow when you prune. In the first session, James and I give you the low-down (the science) on how plants~ including fruit trees~ grow and how get the desired results. In the second session we take you outdoors into the orchard and garden to give you a more hands-on look at how it's done.

Part One: **Tuesday, March 19th, 6-9pm** in our market

Part Two: **Saturday, March 23rd, 1-4pm** in the orchard and garden.

COST: \$25 ea. or \$40 per couple

Pre-registration is required.

Call 250 832 4574 or register in person when the store re-opens. Class size is limited to 15-20 people so early registration is recommended.

Looking forward to an exciting growing season,

Harriet

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 400 million. The number of people aged 75 and over has increased from 100 million to 200 million.

There are a number of reasons for this increase. One reason is that the number of people who are under 15 years of age has increased because of the high birth rate in many developing countries. Another reason is that the number of people aged 65 and over has increased because of the high life expectancy in many developed countries.

The increase in the number of people aged 75 and over is also due to the high life expectancy in many developed countries. This increase is particularly significant because it is the fastest growing segment of the population in many developed countries.

The increase in the number of people aged 75 and over is also due to the high life expectancy in many developing countries. This increase is particularly significant because it is the fastest growing segment of the population in many developing countries.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

There are a number of reasons why the world's population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including:

- *Increased life expectancy*: As people live longer, they have more time to have children.
- *Increased fertility*: Women are having children at a younger age and are having more children.
- *Improved health care*: This has led to a decrease in infant mortality, meaning that more children are surviving.

Another reason why the world's population is growing so rapidly is that the number of people who are under 15 years of age is increasing. This is due to a number of factors, including:

- *Increased birth rates*: The number of children born to each woman has increased.
- *Improved health care*: This has led to a decrease in infant mortality, meaning that more children are surviving.
- *Increased life expectancy*: As people live longer, they have more time to have children.

the 1990s, the number of people aged 65 and over in the United States is projected to increase from 20 million to 35 million.

As the number of people aged 65 and over increases, the number of people aged 75 and over is also expected to increase. The number of people aged 75 and over is projected to increase from 10 million in 1990 to 15 million in 2010.

As the number of people aged 75 and over increases, the number of people aged 85 and over is also expected to increase. The number of people aged 85 and over is projected to increase from 3 million in 1990 to 5 million in 2010.

As the number of people aged 85 and over increases, the number of people aged 95 and over is also expected to increase. The number of people aged 95 and over is projected to increase from 1 million in 1990 to 2 million in 2010.

As the number of people aged 95 and over increases, the number of people aged 100 and over is also expected to increase. The number of people aged 100 and over is projected to increase from 0.5 million in 1990 to 1 million in 2010.

As the number of people aged 100 and over increases, the number of people aged 105 and over is also expected to increase. The number of people aged 105 and over is projected to increase from 0.2 million in 1990 to 0.5 million in 2010.

As the number of people aged 105 and over increases, the number of people aged 110 and over is also expected to increase. The number of people aged 110 and over is projected to increase from 0.1 million in 1990 to 0.2 million in 2010.

As the number of people aged 110 and over increases, the number of people aged 115 and over is also expected to increase. The number of people aged 115 and over is projected to increase from 0.05 million in 1990 to 0.1 million in 2010.

As the number of people aged 115 and over increases, the number of people aged 120 and over is also expected to increase. The number of people aged 120 and over is projected to increase from 0.02 million in 1990 to 0.05 million in 2010.

As the number of people aged 120 and over increases, the number of people aged 125 and over is also expected to increase. The number of people aged 125 and over is projected to increase from 0.01 million in 1990 to 0.02 million in 2010.

As the number of people aged 125 and over increases, the number of people aged 130 and over is also expected to increase. The number of people aged 130 and over is projected to increase from 0.005 million in 1990 to 0.01 million in 2010.

As the number of people aged 130 and over increases, the number of people aged 135 and over is also expected to increase. The number of people aged 135 and over is projected to increase from 0.002 million in 1990 to 0.005 million in 2010.

As the number of people aged 135 and over increases, the number of people aged 140 and over is also expected to increase. The number of people aged 140 and over is projected to increase from 0.001 million in 1990 to 0.002 million in 2010.

As the number of people aged 140 and over increases, the number of people aged 145 and over is also expected to increase. The number of people aged 145 and over is projected to increase from 0.0005 million in 1990 to 0.001 million in 2010.

As the number of people aged 145 and over increases, the number of people aged 150 and over is also expected to increase. The number of people aged 150 and over is projected to increase from 0.0002 million in 1990 to 0.0005 million in 2010.

As the number of people aged 150 and over increases, the number of people aged 155 and over is also expected to increase. The number of people aged 155 and over is projected to increase from 0.0001 million in 1990 to 0.0002 million in 2010.

As the number of people aged 155 and over increases, the number of people aged 160 and over is also expected to increase. The number of people aged 160 and over is projected to increase from 0.00005 million in 1990 to 0.0001 million in 2010.
